The Ninth International Conference on Antimicrobial Agents in Veterinary Medicine (AAVM), will be held in Rome, Italy, October 16-19, 2018. This forthcoming conference follows the success of the past eight AAVM held in Helsinki, Ottawa, Orlando, Prague, Tel Aviv, Washington DC, Berlin and Budapest. This conference has emerged as one of the leading meetings in its field, which provides a very intensive program and encourages communication among the attendees.

Veterinary use of antimicrobials has been increasingly criticized, especially for the potential of resistance transfer from farm animals to humans. Simultaneously, the ever decreasing introduction of new antimicrobial molecules has also limited the number of useful therapeutic agents. Modern approaches for infection reduction in intensive rearing farms are in progress. New ideas of alternatives and "greener" options in the treatment of infectious diseases are under investigation. What the potentials are will also be addressed in the upcoming AAVM meeting.

We look forward to welcoming you to Rome in October.

Prof. Petra P. Cagnardi
Conference Chairperson

Prof. Stefan Soback
Conference Past-Chairperson
